The information contained within is provided as a service to our customers and for their information only. The information and recommendations set forth herein are made in good faith and are believed to be accurate as of the date of preparation or revision. BiPOWER makes no warranty expressed or implied, and disclaims all liabilities from reliance on it.

Section 1 - Identification

1.1 Product Name and Description:

Battery: Lithium-ion, Rechargeable, Non-venting cells and batteries.

Electro-chemistry: Lithium-ion (Li-ion)

This Safety Data Sheet covers all lithium ion rechargeable cells and batteries supplied by BIPOWER CORP.

1.2 Supplier

Office Address Telephone Numbers For Information

 BiPOWER CORP.
 Telephone:
 (323) 981-9498

 2560 Corporate Place, Suite D203
 Fax:
 (323) 981-9468

 Monterey Park, CA 91754
 Emergency Telephone:
 (323) 981-9498

 USA
 Date of Revision:
 January-11-2017

Section 2 – Hazard(s) Identification

The lithium ion cell/battery covered in this Data Sheet is hermetically sealed in an aluminum alloy or metal case and not hazardous if used as recommended by the manufacturer.

Under a normal condition of use, the electrode materials and electrolyte contained in a cell/battery are non-reactive provided the battery integrity is maintained. Risk of exposure exists only in case of mechanical, electrical or thermal abuse.

Warning: the cells/batteries should not be short circuited, punctured, incinerated, crushed, immersed in water, over-discharged, or exposed to a temperatures above the declared operation temperature range of the cell or battery.

Risk of fire or explosion may occur in the above condition of abuse.

Section 3 — Composition/Information on Ingredients

Chemical Name	CAS Number	EINECS Number	% by Weight
Lithium Cobalt Oxide	12190-79-3	235-362-0	25 - 35
Carbon, various forms	7440-44-0	231-153-3	10 - 30
Polymer Binders	NA	NA	0.1 - 1
Copper	7440-50-8	231-159-6	1 - 15
Aluminum	7429-90-5	231-072-3	1 - 10
Biphenyl	92-52-4	202-163-5	0.1 - 0.3
Organic Carbonates	NA	NA	5 - 10
Lithium Salts	NA	NA	1 - 6

Section 4 - First-Aid Measures

In case of battery rupture, major leakage or explosion, evacuate all workers and quarantine the contaminated area. Provide good ventilation to clear out any evacuate fumes, gases or the pungent odor.

Eyes - Rinse eyes with plenty of water for 15 minutes; Seek immediate medical attention.

Skin - Rinse affected area with plenty of water and soap or take a shower for 15 min;

Inhalation - Expose the person to fresh air and use artificial respiration if needed; Seek medical attention if necessary.

Ingestion - Consult a physician or local poison control center immediately;

Section 5 - Fire-Fighting Measures

Extinguishing media:

- 1. Dry chemical or water type extinguishers are the most effective means to extinguish a cell or battery fire.
- 2. A carbon dioxide (CO2) extinguisher is also effective.

Special fire fighting procedures:

Respiratory protection: In all fire situations, wear self-contained breathing apparatus (SCBA) and chemical

apron.

Skin protection: Wear full fire fighting protective clothing and equipment to prevent body contact with

electrolyte solution.

Eye protection: Safety glasses are recommended.

During water application, caution is advised as burning pieces of flammable particles may be ejected from the fire

Causes of unusual fire or explosion hazard:

Cells or batteries that are damaged, opened or exposed to excessive heat/fire may flame or leak potentially hazardous organic vapors.

Section 6 - Accidental Release Measures

Procedures to contain and clean up leaks and spills:

Under a normal condition of use, a battery is hermetically sealed and not hazardous. Leakage or release of hazardous materials contained within a battery would be possible under abusive conditions.

In the event of battery rapture and leakage: contain the spills and cover the spills or leakage with dry sand or 1:1 mixture of soda ash and slaked lime.

Rubber gloves must be used to handle all battery components.

Avoid inhalation of any vapors that may be emitted.

Damaged batteries that are not hot or burning should be placed in a sealed plastic bag or container.

Section 7 - Handling and Storage

Precautions for safe handling:

Avoid any contact with the contents in case of rupture, leakage or explosion. Follow the procedures in Section 6 to handle and dispose the spills or waste.

Batteries are designed to be recharged. However, improperly charging a cell or battery may cause the product to flame or leak. Use only approved chargers and procedures.

Never disassemble a battery or bypass any safety device.

More than a momentary short circuit will cause temporary battery voltage loss until the battery is subjected to a charge.

Extended short-circuiting creates high temperatures in the cell.

High temperatures can cause burns in skin or cause the cell to flame.

Avoid reversing battery polarity within the battery assembly. To do so may cause cell to flame or to leak.

Conditions for safe storage and incompatibility:

Batteries should be separated from other materials and stored in a non-combustible, well ventilated structure with sufficient clearance between walls and battery stacks.

Do not place batteries near heating equipment, nor expose to direct sunlight for long periods.

Do not store batteries above 60°C (140°F) or below -20°C (-4°F).

Store batteries in a cool (below 25°C (77°F)), dry area that is subject to little temperature change.

Do not store batteries in a manner that allows terminals to short circuit.

Maintain the state of charge level at 30-50% when the cell is placed in storage.

Section 8 - Exposure Controls/Personal Protection

Engineering controls and work practices:

Under conditions of normal use, batteries do not emit hazardous or regulated substances. No engineering controls are required for handling batteries that have not been damaged.

Personal protective equipment:

Personal protective equipment should include chemical resistant gloves and safety glasses. In the event of a fire, SCBA should be worn along with thermally protective outer garments.

Section 9 - Physical and Chemical Properties

Appearance: prismatic or cylindrical, hermetically sealed metal container.

Open Circuit Voltage (OCV): 3.7V

Charge temperature range: 0°C to +45°C

Discharge (operation) temperature range: -20°C to +60°C

Recommended storage temperature: 1 month: -20°C to +45°C; 6 months: -20°C to +35°C

Section 10 - Stability and Reactivity

Stability: The batteries are stable under normal operation and storage conditions.

Hazardous Polymerization: will not occur.

Materials to avoid: water, strong acid or alkalis solutions, oxidizing agents.

short-circuiting, disassembling, over-discharging, heating over the declared operation temperature range of the product. Conditions to avoid:

Hazardous decomposition

products:

Carbon Monoxide (CO) and other VOC's

Section 11 - Toxicological Information

No toxicological impacts are expected under normal use conditions.

The electrolytes contained in this cell or battery can irritate eyes with any contact if released.

Prolonged contact of electrolytes with lung tissue, skin or mucous membranes may cause irritation.

Information regarding sensitization, carcinogenicity, mutagenicity or reproductive toxicity related to internal cell or battery components has not been included in this document.

Section 12 - Ecological Information

No ecological impacts expected under normal use conditions.

Information on the ecological impact of internal cell or battery components has not been included in this document.

Section 13 - Disposal Considerations

Do not dispose in fire or submerge in water.

Battery disposal regulations vary on national, state/provincial and local bases.

Disposal must be conducted in accordance with the applicable laws and regulations.

These batteries contain recyclable materials and recycling is encouraged over disposal.

Section 14 - Transport Information

The regulations that govern the transport of rechargeable lithium ion (including polymer) cells and batteries include the International Civil Aviation Organization (ICAO) Technical Instructions and International Air Transportation Association (IATA) Dangerous Goods Regulations and International Maritime Dangerous Goods (IMDG) Code.

The transportation of lithium ion cells and batteries of all types within, to and from the the United States are governed by US DOT CFR 49 Part 171-180 of the US Hazardous Materials Regulations (HMR). CFR 49 Part §173.185(c) and the Special Provisions contained in §172.102 provide information on exceptions and packaging based on details of Watt-hour (Wh) rating, weight, tests and classifications.

Shipping names: Lithium ion cells or batteries;

UN number 3480: Lithium ion cells or batteries;

UN number 3481: Lithium ion cells or batteries contained in or packed with equipment;

Hazard classification: Miscellaneous Class 9 (restricted to transport);

Shipping information: All lithium ion cells or batteries for transport must be of the type proven to meet

the criteria in Part III, sub-section 38.3 of the UN Manual of Tests and Criteria.

Packing Instructions: Packing of lithium ion cells/batteries and batteries contained in or packed with

equipment for transportation are regulated by IATA/ICAO, the 57th Edition of IATA Dangerous Goods Regulations (DGR), Packing Instructions PI965, PI966 and

PI967, IMDG and ADR Code SP188, and P903/908/909, SP230/376/377.

Label requirements: Identification and proper labeling should comply with the applicable regulations.
